Professional Summary

Undergraduate Computer Science student (3.94 CGPA) specializing in Applied Machine Learning, autonomous agent architectures, and systems programming. Experienced in developing end-to-end AI applications, analytical data engines, and automation pipelines using Python, C++, FastAPI, and Next.js. Combines strong computer science fundamentals—data structures, operating systems, and database architecture—with modern generative AI and agentic workflows.

Education

Bachelor of Science in Computer Science

Expected Graduation: 2028

- **Cumulative GPA:** 3.94 / 4.00
- **Relevant Coursework:** Data Structures & Algorithms, Operating Systems, Database Management Systems, Object-Oriented Programming, Artificial Intelligence, Discrete Mathematics.

Technical Skills

- **Programming Languages:** Python, C++, SQL, JavaScript, HTML5/CSS3, Assembly (AVR)
- **AI & Machine Learning:** Autonomous Agents, LLM Orchestration, Scikit-Learn, Deep Learning Fundamentals, Model Evaluation, Data Preprocessing
- **Frameworks & Web Technologies:** FastAPI, Next.js, React, DuckDB, Tailwind CSS, Supabase, Gradio, Streamlit
- **Tools & Platforms:** Git, GitHub, n8n Workflow Automation, MS SQL Server Management Studio, VS Code, Linux/WSL

Key Projects

Multi-Agent Automated Research Pipeline | *Python, LLMs, Gradio, Hugging Face*

- Designed and deployed an autonomous multi-agent architecture capable of synthesizing web sources, summarizing scientific literature, and compiling automated structured reports.
- Integrated agentic workflows and tool-calling mechanisms to streamline complex information retrieval with minimal latency.
- Published an open-source demonstration interface using Gradio hosted on Hugging Face Spaces.

Nexus BI – AI-Powered Business Intelligence Platform | *FastAPI, DuckDB, Next.js, Python*

- Engineered a lightweight, high-performance analytical engine pairing DuckDB with FastAPI for near-instant SQL querying over large datasets.
- Implemented natural language-to-query translation workflows enabling non-technical users to extract aggregations, trends, and visual summaries.
- Designed a responsive dashboard interface with Next.js and Tailwind CSS connected via RESTful endpoints.

TenderLens AI – Procurement Intelligence Monitor | *Next.js, Supabase, n8n, AI Classification*

- Architected an automated public tender tracking platform utilizing n8n workflow automation to ingest and parse distributed procurement notices.
- Implemented AI-driven document classification models to categorize bidding opportunities and flag relevant criteria in real time.
- Built the data persistence layer using Supabase (PostgreSQL) with row-level security and automated alert triggers.

Operating System & Scheduling Simulator | *C++, Algorithms, Data Structures*

- Developed an object-oriented OS kernel simulator implementing priority scheduling, Round Robin, and Multi-Level Feedback Queues.
- Simulated memory allocation, paging tables, and virtual memory page-replacement strategies (LRU, FIFO).
- Integrated custom graph pathfinding implementations to benchmark memory overhead and algorithmic throughput.

Certifications & Training

- **Generative AI Specialist** – iCodeGuru
- **ACT AI Certification** – Skills Bridge & Government of Pakistan
- **Applied Machine Learning Pipelines** – Independent Coursework (Feature Engineering, Classification, & Evaluation)
